PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on project experience in software development, aiming to become an AI / Machine Learning Engineer. Builds backend systems in C# and .NET, designs embedded sensing and ML pipelines, and sharpens problem solving through algorithms and competitive programming. Looking for a collaborative team where I can combine solid software engineering with AI to ship useful, efficient products.

TECHNICAL SKILLS

Languages: C++, C#, Java, Python, SQL, PHP

AI and Data: Machine learning (scikit-learn), algorithms and data structures, MySQL, MongoDB, SQL Server

Backend and Frameworks: .NET, ASP.NET MVC, ADO.NET, Windows Forms

Tools and Platforms: Git, GitHub, Docker, Linux, Visual Studio, VS Code, Arduino IDE / ESP32

Design and Productivity: Adobe Photoshop, Adobe Premiere Pro, Microsoft Word, Excel and PowerPoint

PROJECTS

Wearable Fatigue Detection System | *C++ (ESP32), Python, scikit-learn | Capstone project*

- Built an ESP32 wearable combining PPG (MAX30102), motion (MPU6050) and single-lead ECG (AD8232) sensing, with on-device R-peak detection and local LED and buzzer alerts.
- Streamed telemetry over WiFi to cloud services with optional Telegram alerts and labeled ground truth with a physical push-button.
- Trained Logistic Regression, Random Forest, HistGradientBoosting and SVM models using an episode-level split to prevent data leakage. Random Forest performed best: F1 0.786, accuracy 0.905, ROC-AUC 0.939 on held-out episodes (single-subject, 35-minute dataset).

CivicLens 2.0: Civic Complaint Management Platform | *C#, .NET Framework, Windows Forms, SQL Server*

- Rebuilt and extended the application solo from CivicLens v1, a team project.
- Implemented role-based dashboards for Citizen, Moderator, Police, Journalist and Admin, with an admin approval workflow for new registrations.
- Added per-complaint real-time chat, media attachments, a paginated newsfeed with comments, and a full status-history audit trail.
- Wrote transactional complaint assignment logic and admin tooling including bulk user actions and safe cascade deletes.

Hotel Management System | *Java* - Desktop application for managing hotel operations.
Library Management System | *PHP, MySQL* - Web-based system for library records and users.
4-Scene Transportation Environment | *C++, OpenGL* - Interactive four-scene computer graphics project.
